Reason for Allowance

1. The following is an examiner's statement of reasons for allowance:

Claims 1-15 are allowable over the prior art of record because none of the prior art of record teaches or fairly suggests a system or method for detecting a servo address mark (SAM) during a self servo write process, causing a composite head to write a corresponding type of additional servo data item in a disk at a position offset from the position of servo data containing the detected SAM, by a predetermined distance in a circumferential direction of the disk and moving the composite head in the radial direction of the disk by a predetermined pitch every time sets of additional servo data items are written in the disk in a circle, each set consisting of N unique types of servo address marks. It is noted that the closest prior art, Moran et al (USPN 6,738,205) shows a method and system for self-servo writing a disk drive by transferring a servo reference pattern by magnetic printing onto at least one storage surface of a reference disk. However, Moran et al fail to disclose detecting a servo address mark (SAM) during a self servo write process, causing a composite head to write a corresponding type of additional servo data item in a disk at a position offset from the position of servo data containing the detected SAM, by a predetermined distance in a circumferential direction of the disk and moving the composite head in the radial direction of the disk by a predetermined pitch every time sets of additional servo data items are written in the disk in a circle, each set consisting of N unique types of servo address marks.
